

Presentation of the proposed implementation of Cloud Computing for the San Marcos University

**Phuyu Project
Universidad Nacional Mayor de San Marcos**

Red Telematica

June 2009

Proposed model

Important Facts

- Long term goal
 - Implementation of a Cloud Computing platform under the SaaS model to provide IT services for both UNMSM and companies that need it, regardless of the type of operation performed
- Advantages
 - Low cost for business customers
 - Using Advanced technology in the proposed solution
 - Use free software within the implementation of the proposed model.
 - Technological impact that the University generates as university extension
